Profile

Junior Software Developer with experience in **backend development**, **data engineering**, semantic web technologies, and systems programming. Skilled in **Python**, **SQL**, data processing, and database technologies, with experience leading technical projects and building data-driven applications. Seeking a **junior software** or **data engineering role**.

Education

Charles University in Prague

BSc in Computer Science (Data & Web) — Expected Graduation Jan 2027.

Skills

- **Programming Languages:** C++, Python, Java, Kotlin, PHP, SQL
- **Data Engineering:** Pandas, data modeling, ETL/ELT, RDF, DCAT, SPARQL
- **Databases:** PostgreSQL, MongoDB, relational & NoSQL databases
- **Backend & Systems:** Backend development, REST APIs, Linux, Bash
- **Tools & Infrastructure:** Git, Make
- **Languages (spoken):** English (Fluent), Hebrew (Fluent/Native), Czech (Intermediate)

Experience

Semantic Data Catalog — Team Lead

Academic Group Project – [Github Link](#)

- **Led and coordinated a team** of 4, assigning tasks, managing internal deadlines, aligning technical decisions, and ensuring consistent project delivery.
- Worked extensively with **RDF**, **LPG**, **XML**, **XSLT**, **JSON**, **JSON-LD**, and **CSV**, applying different data models and formats for data representation and transformation.
- Implemented data transformation and interoperability workflows, including **CSV on the Web (CSVW)** and semantic data publishing.
- Maintained consistency and uniformity across team deliverables, including shared file structures, data formats, and implementation decisions.
- Resolved team issues and coordinated technical decisions to keep development aligned and project milestones on track.

Game Jam Project — Solo

47-Hour Game Jam – [Github Link](#)

- Designed and developed a complete game independently within **47 hours** using **C++** and **SFML**.
- Continued development beyond the game jam, significantly **improving code structure**, **maintainability**, and overall architecture.
- Implemented game logic, rendering, input handling, **custom data structures**, and asset management.
- Used **Git** for version control and a **Makefile** for build automation and cross-platform compilation.
- Built and debugged the project across **Linux** and **Windows**, demonstrating independent problem-solving under tight time constraints.
